

Lauschschrecke *Mecostethus parapleurus*

Map showing the distribution of *Mecostethus parapleurus* in the Aargau region of Switzerland. The map includes geographical features like the Aare river, Dünneren river, and regions like TAFELJURA, KETTENJURA, BALSTHAL, FLACHLAND, and MOLASSE-HÜGELLAND. Numerous colored circles indicate observation points, with colors and sizes corresponding to the number of individuals observed and the time period. A legend in the bottom right corner explains the symbols: blue for both observation periods, green for 2002-2011, orange for 1992-2001, cyan for new observations from 2012, and grey for 1983-2011. Circle sizes represent the number of individuals: very large (>100), large (>25), medium (3-9), and small (1-2). Grey circles represent observation points without data from G. Artmann. A scale bar indicates 1,000 meters.
